OUR DIVISIONS

ABOUT US

Technical Group for Integrated Engineering Solutions (TGIES) offers high quality consulting and implementation services for complex projects involving various types of equipment and machinery installation.

Our main services are divided into three main categories; Project Study and Planning, Project Implementation, and Project Maintenance and Support. TGIES also provides project management solutions to help streamline processes and improve their efficiency, enabling clients to consistently achieve successful results. Our expertise allows us to expand our service offering to other relevant fields to cater to our clients' needs and requirements.

We capitalize on our strategic partnerships with our suppliers in order to guarantee quality deliverables that are in line with international standards and qualifications to be able to meet our clients' expectations.

TGIES will oversee your project from the initial phase to the implementation phase. Our team of experts is formed according to the level of experience and resources needed for each project.

TGIES' main operations are in the Middle East and Africa regions, with a vision to expand to other areas in the world.
